

DIVISION 8

DOORS AND WINDOWS

- 8.1 Entries** - The Board encourages automatic sliding doors at two-way traffic areas where the public is carrying baggage or boxes. Automatic swinging doors are acceptable in one-way traffic areas. Turnstiles should not be used except where required for security purposes.

Entries and openings into the building (i.e., baggage carriers, service openings, etc.) should be sealed by the use of vestibules, curtains, or other means to be reviewed by the Airport Contact. Conditioned air loss is a severe problem and needs to be addressed during design. If hanging curtains are utilized, a double row is suggested with a minimum five (5) foot separation.

- 8.2 Door Locks** – Door locks for all Airport owned buildings shall have Medeco Keymark Products cores. Coordinate hardware schedule with Airport Contact.
