DFW International Airport Monitoring Swine Flu Situation

DFW International Airport, Texas (May 8, 2009) – DFW International Airport, continues to monitor the swine flu situation and work with its federal, state and local government agencies, airlines and other Airport stakeholders.

The Airport is part of a vast national network of resources monitoring the situation, under the direction of the U.S. Centers for Disease Control and Prevention (CDC).

At this time, there are no reported cases of swine flu affecting DFW passengers or Airport employees.

Passengers arriving from locales within Mexico are receiving information on how to identify the symptoms of swine flu in both English and Spanish. U.S. Customs and Border Protection officers are distributing the information.

Additionally, many airlines are allowing concerned passengers to change their reservations to Mexico at no cost if they do not wish to travel.

Travelers concerned about the swine flu should visit the CDC Web site at www.cdc.gov/swineflu.

About DFW International Airport

Located halfway between the cities of Dallas and Fort Worth, Texas, DFW International Airport is the world's third busiest, offering nearly 1,800 flights per day and serving 57 million passengers a year. DFW has been named "Best Airport for Customer Service in North America" by an Airports Council International survey of passengers in 2006 and 2007. DFW International Airport provides non-stop service to 134 domestic and 37 international destinations worldwide. For the latest news, real-time flight information, parking availability or further details regarding the many services provided at DFW International Airport, log on to www.dfwairport.com.
